Tissue Sampler

Product Description

The Tissue Sampler takes a fast and clean collection of a tissue sample to test for genetics and disease.

Using the Tissue Tagger, a tissue sample is collected and hermetically sealed, with preservative in the sample container. The vial is pre-labelled with a scannable unique barcode, to tie to an animal's ID. That barcode can be matched with electronic or visual identification tags.

Samples can then be sent to a laboratory for testing, without the need for special packaging or refrigeration.

The preservative pellets are not harmful, non-toxic and cannot cause cross-contamination in the laboratory.

Technical Specifications

Product Name	Tissue Sampler
Material	TPU Polyurethane
Applicator	Z Tags Tissue Tagger
